

PRODUCT INFORMATION

PROCARE ALUMINIUM PASTE

Description

Aluminium Paste is a synthetic silver-coloured multi-purpose grease with aluminium pigments.

Benefits

- Water resistant
- No oil carbon formation at high temperatures
- Separating effect even at extreme temperatures
- Good protection against corrosion, oxidation and scaling
- Very high pressure rating and excellent separating effect
- Temperature range: -40°C to +250°C (thin film) to +1100°C (dry)

Application

- For basic and thin-film lubrication
- For preventing friction and wear
- For use as parting lubricant for reliable, trouble-free disassembly
- For protecting screw connections and achieving even friction

Instructions

Pre-clean the surface to be treated. Use a sponge, cloth or brush to apply a thin layer to the area to be lubricated.

No need to worry about any excess.

VOLUME

400 ml
