

## PRO CARE WINTER DIESEL ADDITIVE

### Description

**Winter Diesel Additive** is a special winter system agent with an agent combination to improve the cold start behaviour of diesel vehicles. The system agent has a positive effect on exhaust emission characteristics and combustion noise.

### Benefits

- Elevates the cetane number
- Prevents transition problems from summer to winter diesel operation
- Keeps diesel fuel and heating oil in operation in extreme cold conditions
- Prevents slushiness of the diesel fuel and the fuel lines and filters from becoming clogged

### Application

- All diesel engines in the automobile and systems sector
- To avoid cold start and cold running problems, even in extreme cold conditions
- For all heating oil tanks

### Instructions

For diesel: Add to the fuel tank before the temperature reaches the limit of 0°C.

For heating oil: Add to the fuel tank before the temperature reaches the limit of 0°C.

### Dosing

One can is able to improve the cold filter plugging point (CFPP value) with 300 litres by max. 3°C, with 150 litres by max. 6°C and with 60 litres by max. 12°C.

### Notice

! The addition before refuelling ensures optimal mixing and effect.

VOLUME

250 ml

PACKAGING

24 Pcs.  
1 Box
